Andrews Avenue

Conceptual Artwork Design Proposal

Conceptual Patterning

The proposed material for this artwork is weathering steel. It is maintenance free and sustainable. The patterning is laser cut from 0.375" or 0.5" plate. Each pier carries its own pattern grill, on both sides, unless noted, suggesting shells and abstract natural forms. At night the pattern grills are backlit, top-down, with programmable LED lighting. The spiral is a fundamental life form, supporting a continuum of life in its many forms, providing positive, enduring imagery for people of all ages and diversity.

Conceptual Artwork Design Proposal

Lights may be programmed to change color each season or for special events

Conceptual Artwork Design Proposal

Pedestrian areas will be lit at night and by day
