Performance Measures

| Deliverable # | Tasks | Task Description | Indicator | Costs per Unit | Outcome Measures |
|----------------------|--------------------------|---|----------------------------|---|---|
| 1 | Invasive Species Removal | .347 – .603 acre invasive species removal in northwest corner of Easterlin Park | Invasive species kill rate | \$13,584.20 per .347-.603 acres of treatment. | 95% kill rate of invasive plant species. |
| 2 | Tree Planting | Plant 5 native tree species (3 each) to enrich canopy in northwest corner of Easterlin Park | Number of trees planted | \$1,509.35 total | Planting of 15 trees according to Florida Division of Plant Industry Grades and Standards |

Describe in detail the activity or work to be conducted.

The proposed project is in the northwest corner of Easterlin Park, 1000 N.W. 38th St., Oakland Park, FL 33309 (see attached map for exact location). The unit is located in a remanent cypress dome wetland that has been degraded over time to due to development, disturbance events, and invasive species encroachment. The unit is bordered by NW 38th Street to the north, a canal to the west, and a disc golf trail and nature trail to the south and east. It is approximately .347 acres but depending on invasive treatment costs this area could be expanded southward to .603 acres. The objective is to help restore this wetland ecosystem by treating and removing invasive species that currently dominate this section of the park and replace the cleared areas with native plantings.

To implement this plan according to the timeline laid out in the project narrative, a third-party contractor will be hired to chemically treat all the FISC category I and II species located in the unit with an expected 95% kill rate. Approximately 50% of the invasive trees are to be removed to clear an area for a native planting. Species to be removed from the unit are shoebutton ardisia (*Ardisia elliptica*), Javanese bishopwood (*Bischofia javanica*), Brazilian pepper (*Schinus terebinthifolia*), queen palm (*Syagrus romanzoffiana*), air-potato (*Dioscorea bulbifera*), arrowhead vine (*Syngonium podophyllum*), as well as a few other species of non-native and potentially invasive palms species. The principal investigator (PI), Elena Suarez, will be responsible for managing the procurement of the contractor and overseeing the work being carried out. This part of the project is expected to take place between July – December 2025.

Beginning in January 2026, a third-party contractor will be hired to find the plant material, conduct the planting, and provide supplemental watering during the 60-day grow-in period. Species selected for planting are bald cypress (*Taxodium distichum*), laurel oak (*Quercus laurifolia*), pond apple (*Annona glabra*), red maple (*Acer rubrum*), and dahoon holly (*Ilex cassine*). Approximately ten trees of each species will be placed in the cleared areas, this number could change depending on costs and space from the invasive removal. For this portion of the project, the PI along with key staff member Brandon Justice, who is an ISA certified arborist, will ensure plants satisfy the Florida Division of Plant Industry Grades and Standards, the stipulations of the plant requirements section of this funding opportunity, and are planted and placed appropriately. The PI will handle the procurement for this contract and ensure the work is completed successfully including the supplemental watering. Once the planting is completed, the PI will submit the iTree Design Report for the year 5, 15, and 25 assessments. The planting and 60-day grow-in period is expected to conclude by the end of June 2026.

The Three (3)-year Maintenance plan is estimated to begin in July 2026 and continue through July 2029. The maintenance plan consists of quarterly check-ins of the site and re-treatments of any invasive species. The plantings will be monitored as well during this time and interpretive signage to be placed to provide a public education opportunity.

FDACS, Florida Forest Service (FFS) is requesting proposals for grants to:

- Remove invasive plants and replace them with native trees in areas where they will provide direct benefit to Floridians through energy reduction, mitigating urban heat, water or air quality improvement, stormwater runoff avoidance, or increase greenspace accessibility. Projects in this category must follow the tree planting requirements listed later in this section.
- Plant trees in riparian or coastal waterway areas to decrease erosion, improve stormwater runoff capture, and enhance the water quality of Florida's waterways. Projects in this category must follow the tree planting requirements listed later in this section.
- Provide a service that enhances tree preservation during construction by offering advising to developers and homebuilders at no cost to the builder. Other proposals by local governments to enhance tree preservation during construction will be considered.

Scope:

There are 3 categories for this grant funding:

1. Invasive species remove/replace
2. Riparian area tree plantings
3. Tree preservation during construction consulting

Invasive Species Remove/Replace:

- Projects should be aimed at conducting invasive plant species control through mechanical, herbicidal, or other means as long as they are recommended through best management practices for invasive species control.
- Selected applicants will be required to submit a count of how many invasive tree species were removed through this grant program.
- Once the invasive species are removed, selected applicants will then be required to replant the site with an appropriate number of native tree species suitable to the project site. No one species should make up more than 25% of the planting selection.

Riparian Area Tree Planting:

- Plantings must be completed within 200-feet of a riparian area, such as a stream, river, canal, or other waterbody.
- All projects must follow the planting requirements listed later in this section.
- Trees must be suitable to the site, and applications must show that care will be taken as to not disturb the waterbody with planting or maintenance activities.

Tree Preservation During Construction

- This category offers a new opportunity for eligible entities to provide incentives for tree preservation during construction within their jurisdiction. The objective of this program is to provide an opportunity for selected applicants to fund the availability of expert advising towards those in the construction industry.
- Eligible activities for this category include the contractual hiring of a certified arborist to provide consulting to a construction project. City staff that is comparably qualified may be funded with this grant as well, so long as the staff-person(s) being funded are not otherwise associated with enforcement of the jurisdiction's tree protection or related ordinances.
- If selected, applicant(s) must utilize a competitive process to determine which contractor will receive advising services pursuant to all federal, state, and local requirements regarding competitive selection.

Tree Planting Requirements:

1. Trees/palms (including those planted as part of the local match) must be at least Florida Grade #1 or equivalent Florida Division of Plant Industry, Grades and Standards found at cmedia.fdacs.gov/content/download/103635/file/grades-and-standards-for-nursery-plants-2022.pdf
2. Trees may not exceed a 4-inch caliper. Palms may not be taller than 16 feet, clear trunk.
3. Minimum tree size is 1½ inch caliper, in at least a 15-gallon container.
4. At least three tree species native or naturalized to the area and suitable for the site and objective must be planted. No species may represent over 25% of the total number of trees planted during the project.
5. Up to ten percent (10%) of the grant award may be used for the purchase and/or installation of irrigation equipment or an irrigation system, or for supplemental watering during the 60-day grow-in period.
6. Trees listed on the Exotic Pest Plant Council's MOST RECENT list of Florida's Invasive Species may not be planted as any part of this grant program. The list may be found at www.fleppc.org
7. Maximum allowable cost per individual tree or palm is \$500, which can be split between grant and match for purchase and planting.
8. Written approval is required (as part of the proposal) from the Florida Department of Transportation for planting and maintenance on any state right-of-way.
9. Eligible multi-stemmed tree species include only those listed on the Right Tree/Right Place posters produced by the Florida Urban Forestry Council, unless FFS permission is granted for another species.
10. A maximum of \$15 per tree may be spent on planting materials during the 60 day grow-in period only.
11. Purchase and planting of shrubs and ground covers in conjunction with tree planting may only serve as a matching cost, and as such cannot be reimbursed.
12. Proposals must include the following information:
 - a. Location map.
 - b. Minimum of three, color photographs of the planting site.
 - c. Detailed planting plan (site plan) which shows the location of the trees/palms, existing structures, and site limitations such as underground utilities and overhead wires.
 - d. Written approval from the Florida Department of Transportation for planting and maintenance on the State right-of-way, if applicable.

EXHIBIT 1

- e. Three (3)-year maintenance plan to be carried out by the grant recipient at their expense. Maintenance costs incurred after certification by the Florida Forest Service are ineligible for reimbursement.
 - f. Resolution from the managing agency of the property (if different from the applicant) which states they concur with the grant proposal and maintenance plan.
13. A 60-day “grow-in period” is required prior to Certification of Acceptance by the Department and the processing of final reimbursement. The proposal should state how the trees will be watered and cared for during the grow-in period.
14. Tree Plantings must follow established procedures for handling, placement, and maintenance. Refer to <http://hort.ifas.ufl.edu/woody> for additional guidance.
15. After tree planting is completed, an iTree Design report of the project is required to be submitted prior to processing the final reimbursement. This tool estimates the future reduction in storm water runoff and increase in water quality over the life of the planted trees. The report should include assessments for years 5, 15, and 25. iTree Design is an easy to use and free program that can be found at <https://design.itreetools.org/>.

III. Eligibility Information

Qualified applicants are local governments, Native American tribal governments, volunteer groups, nonprofit organizations, and educational institutions.

Only one application is allowed per applicant.
